BATTERY CRIMPING TOOLS

novopress

HPA 400 G2 / HPA 400 G2 PLUS

BATTERY CRIMP TOOL WITH CHARGER AND TEST STRIP.
HPA 400 G2 - 18V 1.5AH LI-ION BATTERY X 2,
HPA 400 G2 PLUS - 3AH LI-ION BATTERY X 2
HPA 400 G2 is a battery crimp tool that works without die sets on copper and aluminum capped lugs. Cable lugs and joint sleeves are pressed with the same crimp head from 16-400 mm² CU & 50-400 mm² AL. HPA 400 G2 works like other v-crimp novopress equipment, it is a crimp that works on most types of cable lugs / splice sleeves. The crimp tool crimps until the correct pressure is reached, meaning that novopress with its v-crimp has an automatic overcrimp function that crimps a bit extra in those cases where the cable's physical area is no longer measured (quite usually today because the area is now determined by conductivity and not by physical area). Features: - weight 5.7kg excl. battery- length 453mm excl. battery-120 crimps per charge (with 1.5 ah battery) - pressure force 110kn- rotatable crimp head allows for work even where space is limited - the return of the piston is manually controlled and needs do not go back to its end position, this leads to shorter preset times - no set times for back changes and no expensive investment costs for those sets in different areas. Less to carry and less to lose-Li-Ion battery with indicator led lighting that facilitates work in less illuminated environments HPA 400 G2 complies with IEC 61238-1 and SEN 24 50 10/12 standards. In addition, the HPA 400 G2 is equipped with preforms, c-sleeve die sets, hex die sets and cutting knives. HPA 400 uses the same accessories as novopress's former top-sellers HPM 400 / HPH 400 and earlier versions of HPA 400. The tool is delivered in a case with 2Li-Ion batteries, 1 battery chargers and a test bar for calibration.

HPM 400

CRIMP TOOL HAND HYDRAULIC. CU 16-400mm²,
AL 50-400mm²
This is a hand-hydraulic crimp tool from novopress that works without die sets on copper and aluminum cable lugs. Cable lugs and joint sleeves are pressed with the same die sets from 16-400 mm² cu & 50-400 mm² AL. HPM 400 works like other v-crimp novopress equipment, it's a crimp that works on most types of cable lugs / splice sleeves. Crimp tool crimps until right pressure is achieved, meaning that novopress with its v-crimp has an automatic overcrimp function that crimps a bit extra in those cases where the cable's physical area is no longer met (quite usually today because the area is now determined by conductivity and not by physical area). Features: - 5.9 kg - length 550 mm - 12 tons of pressure force (120 kn) - rotatable crimp head allows work even where space is limited. The return of the piston is manually controlled and does not have to return to its end position, resulting in shorter crimp times. No set times for die set changes and no expensive investment costs for those sets in different areas. Less to carry and less to lose. The HPM 400 complies with IEC 61238-1 and SEN 24 50 10/12 STANDARDS. As a complement, the HPM 400 can be equipped with preforms, C-SHEATHS, hex die sets and cutters. The HPM 400 uses the same accessories as the HPA 400 / HPH 400. The tool is delivered in sheet metal case with a test rod for calibration.
